WORK EXPERIENCE

Software Engineer, GE Healthcare

August 2022 – Present

- Developed a Python-based Pipeline Service for the DevOps team, tracking tag release usage and other attributes reducing manual tracking efforts by 60%.
- Implemented a Real-time Grafana Dashboard, reducing incident reporting & response time by 40%.
- Integrated Kong API Gateway for L7/L4 traffic flow across Monitoring Devices, configuring TLS termination/initiation to encrypt service-to-service communication and reduce exposure risk by 35%.
- Built internal Kong plugins for Field Engineers – sorting and access-restriction plugins limiting non-essential page access – reducing workflow complexity; maintained release documentation and manuals.
- Led migration from Kong API Gateway to APISIX for L7/L4 traffic handling, implementing test automation, resolving ingress sync issues, and developing a secure secret-handling mechanism.
- Technologies Used - **Java, Groovy, Python, C++, PostgreSQL, Shell Scripting, Jenkins, Grafana, Helm, Kubernetes, Docker, Pytest, Kong API Gateway, APISIX**

Research Intern, Wolfram - [Project](#)

June 2021 – July 2021 (2 months)

- Designed an expression-diff algorithm in Wolfram Language using hierarchical, position-based diffs via `ReplacePart`; awarded Featured Contributor Badge, selected as Staff Pick.

SKILLS

Languages and Tech Stack: C, C++, Python, JavaScript, Java, Wolfram, Mathematica

Technologies: Git, Django, ReactJS, Shell Scripting, PostgreSQL, MySQL, Docker, Kubernetes, Groovy, CI/CD Pipeline, Jenkins, Helm, Kafka, Elasticsearch, Kong API Gateway, Pytest, Google Cloud, Grafana, Linux, Microservices

Other Skillset: Figma, Animation with Adobe AfterEffect, 3-D Design with Blender

PROJECTS

LogiTraffic | [GitHub](#) | [YouTube](#)

- Engineered a full-stack IoT vehicle monitoring platform delivering real-time tracking of GPS location, speed, fuel level, and traffic conditions.
- Implemented anti-theft security features, including remote vehicle locking, live driver video streaming, and driver image capture, improving incident documentation and response.
- Built end-to-end solution using Arduino, Raspberry Pi, Firebase, JavaScript, ReactJS, Django, and Machine Learning.
- Finalist, E-Ujjwala Hackathon 2020, Birsa Institute of Technology, Jharkhand (Team Aztecs).

Sanjeevani | Github - [Web Version](#) / [App Version](#) | [Certificate of Appreciation](#)

- Built a full-stack Android/Web IoT platform for real-time patient vitals monitoring and remote medical consultation.
- Developed a real-time chat interface connecting patients and doctors for consultation and treatment prescription.
- Conducted applied research at the National Institute of Technology Andhra Pradesh on healthcare monitoring systems, contributing to system design and validation.

EDUCATION

National institute of Technology Raipur

Bachelor of Technology(B.Tech): **Hons. Gold Medalist - GPA: 8.51/10.00**

Krishna Public School

CBSE - 12th: **Percentage: 89.6%**

Raipur, Chhattisgarh, India

Aug 2018 – May 2022

Raipur, Chhattisgarh, India

April 2017 – April 2018

RECOGNITION & ACHIEVEMENTS

Winner: Overall 1st Position at Codeutsava 5.0 organized by Turing Club of Programmers, NIT Raipur (2022)

Mentored at: SparkDev Robotics Program 2021 (UPE FIU), HackOdisha 2021, HackNITR 3.0, HackCBS 4.0, ShellHacks 2021 (UPE FIU)
